BCR LeadBook

Install on Android and quick user guide. Record a client meeting in under five minutes, then remember every detail before the next call. Works offline: no account, no internet, no subscription.

Part 1: Install the app (about 2 minutes)

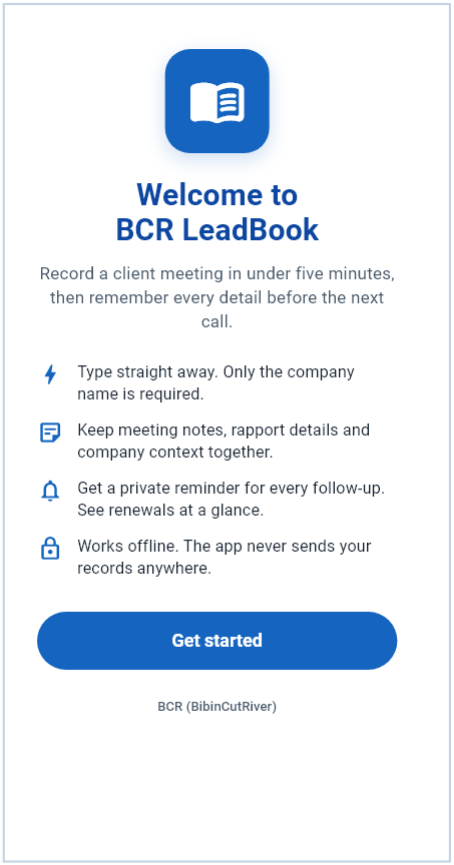

1. **Get the file** BCR-LeadBook-1.0.0.apk (about 59 MB) onto your phone: send it to yourself by WhatsApp, email or Google Drive, or connect the phone by USB and copy it to Downloads. Needs Android 7.0 or newer.
2. **Open the file** on the phone (Files / Downloads app, or tap it inside WhatsApp / Gmail).
3. If Android says your phone isn't allowed to install unknown apps from this source, tap **Settings**, switch on **Allow from this source**, press Back, then tap **Install**.
4. If Google Play Protect shows "App not scanned" or "unknown developer", tap **More details > Install anyway**. This only appears because the app is installed from a file instead of the Play Store.
5. Tap **Open**, then **Get started** on the Welcome screen.
6. The first time you save a follow-up with a reminder, tap **Allow** when the phone asks about notifications.

Good to know. To update, install the newer APK over the old one; your data stays. **Do not uninstall** the app without making a backup first: uninstalling deletes all records. On Xiaomi, Oppo, Vivo, Huawei or Samsung phones with aggressive battery saving, set Settings > Apps > BCR LeadBook > Battery > Unrestricted so reminders arrive on time.

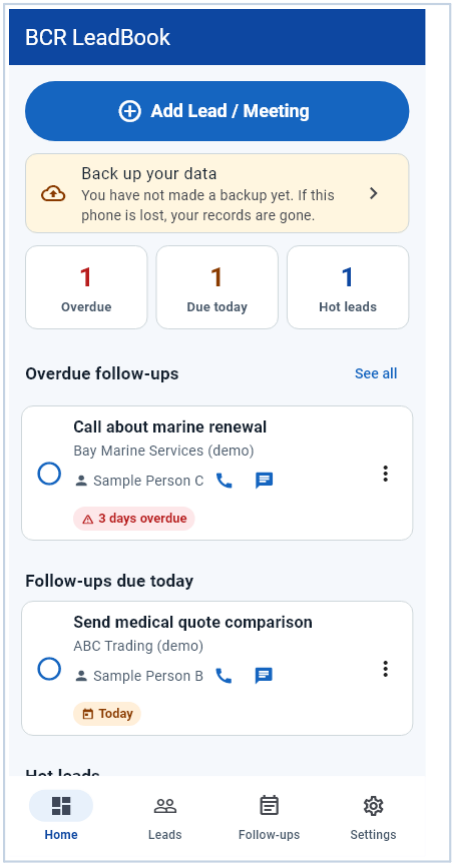

Part 2: Using the app

The app has four tabs along the bottom: **Home** (what needs attention today), **Leads** (all your companies, searchable), **Follow-ups** (your to-do list) and **Settings** (backup, export, reminders).

Screenshots in this guide are rendered from the real app screens with sample data (companies marked "demo" and "Sample Person" are fictional).

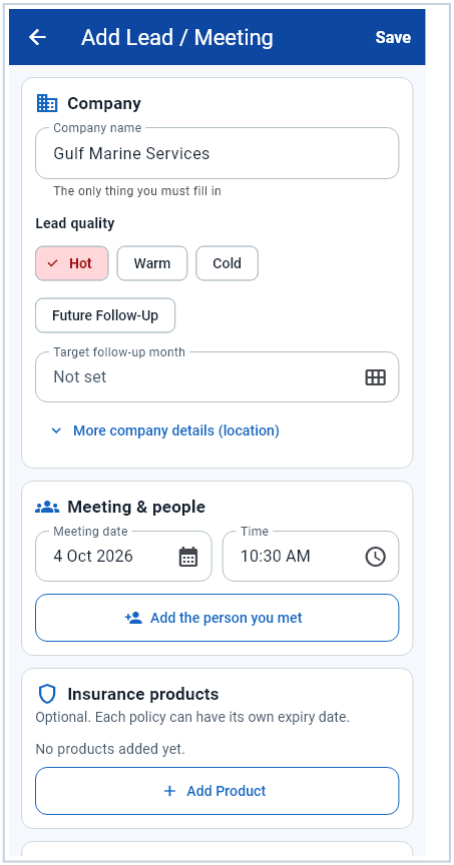

Welcome screen: tap Get started

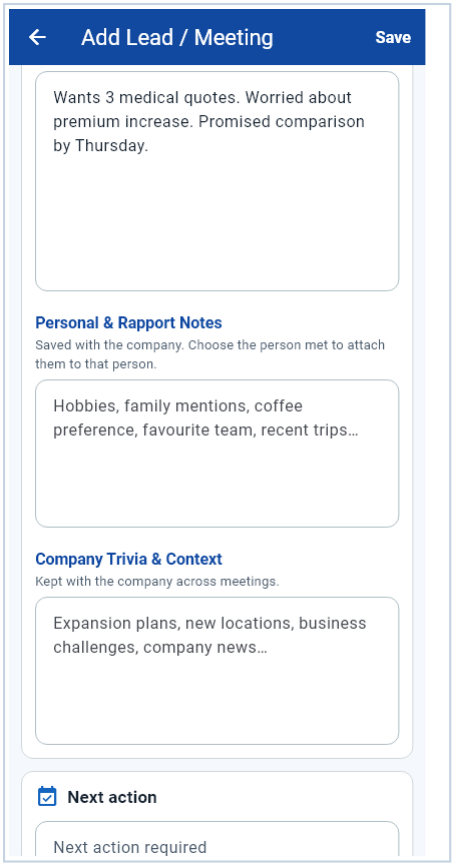

Home: today's follow-ups, hot leads, renewals

Home screen

1. **Add Lead / Meeting** is the big blue button. Use it after every meeting.
2. The three boxes show how many follow-ups are **overdue**, **due today**, and how many **hot leads** you have. Tap one to see them.
3. Scroll down for **Upcoming renewals** (policies expiring in the next 90 days) and **Recently updated** companies.
4. The yellow card reminds you to **back up** your data. A second yellow card appears if you left a form unfinished: tap it to resume.
5. On any follow-up, tap the **phone** or **chat** icon to call or WhatsApp the contact. The app only opens the phone or WhatsApp; it never sends anything by itself.

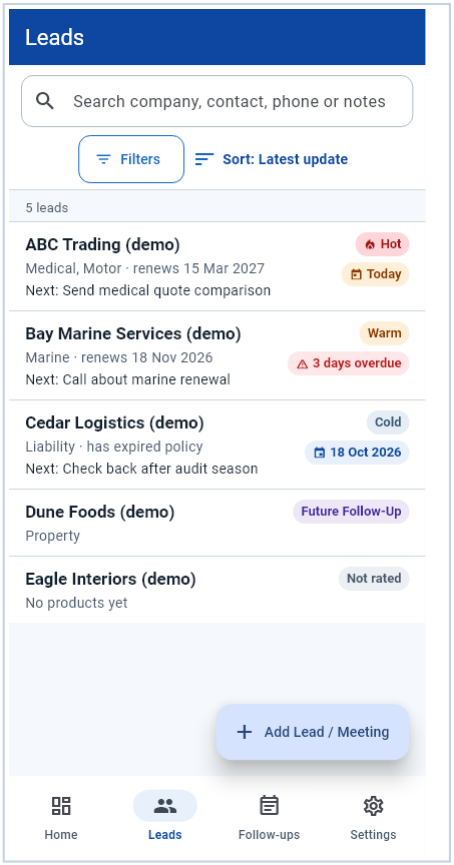

Add Lead / Meeting: company, quality, people, products

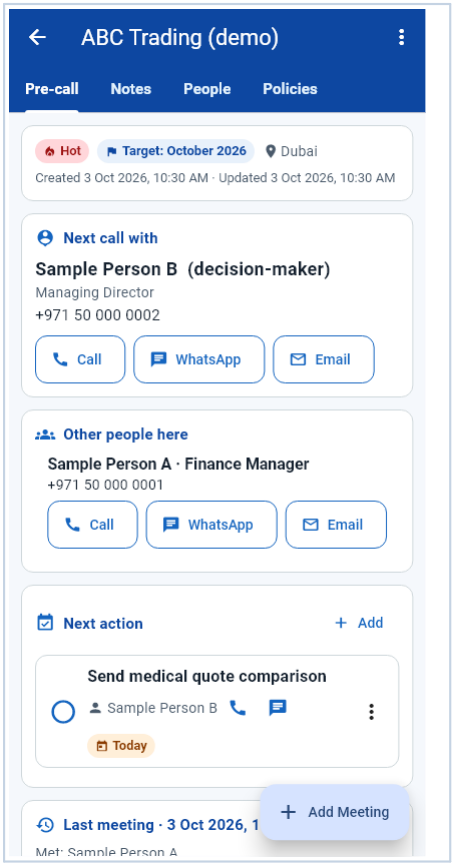

The three note boxes and next action

Recording a meeting (under 5 minutes)

1. Type the **Company name**. This is the only required field; everything else can be added later. If a similar company is already saved, the app offers **Open it**; tap This is a different company if it is not the same business.
2. Pick a **Lead quality** (Hot, Warm, Cold, Future Follow-Up). Tap it again to un-choose. Optionally set the **target follow-up month**.
3. **Add the person you met** (name is enough; add phone with country code, e.g. +971 50 123 4567). Next time just pick them from the list. For the next call with someone else (e.g. the decision-maker), switch off “Next call is with the same person”.
4. **Add Product** for each policy (Medical, Motor, Property, Marine, Liability, Other). Set the expiry date, or leave it unknown. Use **Add Another Product** for more.
5. Write your notes: **Meeting Summary & Minor Details** (discussion, requirements, objections, promises, next steps), **Personal & Rapport Notes** (hobbies, family, coffee order, favourite team; kept with the person for every future meeting) and **Company Trivia & Context** (expansion plans, news).
6. **Next action**: type it, tap a day (Mon–Fri, Tomorrow, Next week…) and keep **Remind me** on (9:00 AM by default).
7. Tap **Save**. A green “Saved” message confirms it. If you are interrupted, your work is kept as a draft.

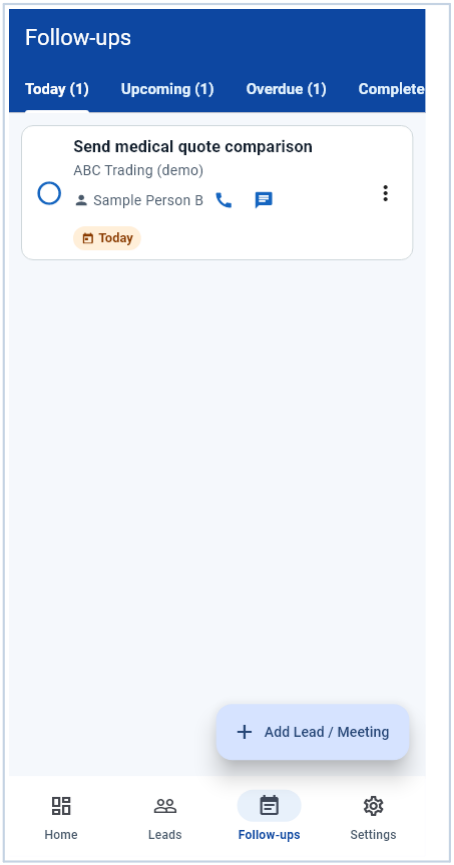

Leads: search, filter, sort

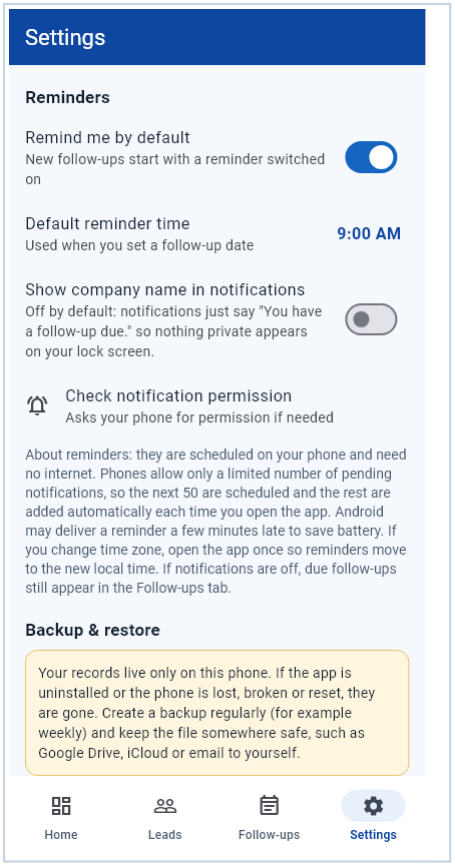

Company page, Pre-call tab

Finding clients and preparing for a call

1. **Leads** tab: type in the search box to find a company, contact name, phone number (with or without +971 or a leading 0) or any word from your notes. **Filters** narrow by quality, target month, insurance line and follow-up status; **Sort** by next follow-up, latest update, name or nearest policy expiry. Colours always come with a text label.
2. Tap a company to open it. The **Pre-call** tab shows who to call (with Call / WhatsApp / Email buttons), other people there, the next action, the last meeting summary, rapport reminders, company context and policy expiries (“23 days left”, “Expired”, “Expiry unknown”).
3. Other tabs: **Notes** (full dated meeting history and all rapport notes), **People**, **Policies**.
4. **Add Meeting** (blue button) records the next meeting as a new dated entry. Old notes are never overwritten. If follow-ups are still open, the app asks which ones this meeting took care of.

Follow-ups: Today, Upcoming, Overdue, Completed

Settings: reminders, backup, export

Follow-ups, reminders and your data

1. **Follow-ups** tab: tap the circle to mark a follow-up done (Undo is offered). The three-dot menu lets you **Reschedule** (quick dates), **Snooze until tomorrow**, **Snooze for a week**, edit or delete. Changing or completing a follow-up updates its reminder automatically.
2. Reminders say only “You have a follow-up due.” so nothing private shows on a locked screen. If you refuse notification permission, the app still lists everything that is due.
3. **Mistakes**: deleted something by accident? Tap **Undo** in the message that appears. Saved a client twice? Company page > three-dot menu >**Merge into another company**.
4. **Renewals**: Home > Upcoming renewals > See all. Filter by line (for example only Medical) and period.

Protect your data. Your records live **only on this phone**. If the app is uninstalled or the phone is lost, broken or reset, they are gone. Go to **Settings > Create backup** every week and save the file somewhere safe (Google Drive, email to yourself). To recover or move to a new phone use **Restore from backup file**. **Export to CSV** creates spreadsheets for Excel / Google Sheets, including a renewals worklist; private rapport notes are included only if you tick the box. Backup and CSV files are not password-protected: keep them private.
